EXAMINER'S STATEMENT OF REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

Independent claims 1 and 4 are allowable because the prior art of record does not disclose or reasonably suggest a spontaneous emotion unit that causes state transitions to occur repeatedly between emotion states according to an operation representing a stochastic model of a Schrödinger equation, in combination with a knowledge database that classifies collected knowledge depending on degrees of correlation with emotion states. *Chase* represents the closest prior art of record, disclosing an association between emotional descriptors and words or phases of a given subject in a language. Thus, a record identifies a context and part of speech for a given word or phrase having a traditional dictionary definition, and associated with each record are one or more emotional descriptors from one or more emotional categories. (Column 10, Lines 19 to 28) *Sadakuni ('056)* teaches an interactive artificial intelligence device, where behavior is modified based on the device's experience through transitions between emotional states. (Column 14, Line 32 to Column 15, Line 62: Figures 10 to 12) However, *Chase* at least does not disclose searching a knowledge database for related knowledge using a search key, and *Sadakuni ('056)* does not cause transitions between emotion states to occur repeatedly according to a stochastic (random) model. Applicant's Specification, Page 3, Lines 13 to 21, teaches an objective to provide an inspiration model device that simulates human conception by providing emotional fluctuations similar to a 'brainstorm'.

Independent claims 3 and 6 are allowable because the prior art of record does not disclose or reasonably suggest a spontaneous emotion unit that causes state transitions to occur repeatedly between emotion states according to an operation representing a stochastic model of a Schrödinger equation, in combination with a surface storage unit that captures reaction to emotion states and stores them for a predetermined period and forgets them after a predetermined period has elapsed, and increasing and decreasing probabilities by encouragement and suppression when a frequency becomes greater than a prescribed value. *Sadakuni* ('056) teaches an interactive artificial intelligence device, where behavior is modified based on the device's experience through transitions between emotional states. (Column 14, Line 32 to Column 15, Line 62; Figures 10 to 12) Moreover, it is known that neural networks are operative to increase and decrease probabilities of state transitions through a learning algorithm. However, the prior art of record does not disclose or reasonably suggest at least forgetting a combination of an external input and an emotion state after a predetermined time period has elapsed, and causing transitions between emotion states to occur repeatedly according to a stochastic (random) model. Applicant's Specification, Page 3, Lines 13 to 21, teaches an objective to provide an inspiration model device that simulates human conception by providing emotional fluctuations similar to a 'brainstorm'.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
